

LOOKING FOR NON-BLEEDING COLORS?

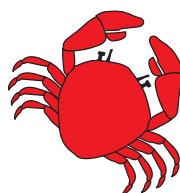

BioColor has developed unique oil-soluble non-bleeding colors for surimi-based products. Color hue can be easily changed according to customer needs.

With BioColor you will achieve the most desirable color intensity, natural appearance and stability for your fish sticks. The hue can be adjusted from pink to orange to simulate the color of natural shellfish products.

And for the fish paste, ask for our white color. In surimi, the whiter the better.

Try our fish sticks solutions, we are sure you will be surprised!

These are only a few examples of the solutions we can provide. For further details regarding these or other BioColor natural colorants, please contact us or our agent in your country.
